

# Custom Colour Printing Guide

Aquavision can now offer both bespoke and standard sized glass in any colour or design you can imagine. Perfect for childrens bedrooms, colourful bathrooms, kitchen splashbacks or to decor match other areas.

The customer will need to fill in the Custom Colour Form and if necessary send over the file in a suitable format. A full technical drawing will be produced showing the final product. A signed copy of this will need to be returned.

The 1200dpi printer uses CMYK ink so all colours will need to be formatted accordingly. Should a solid colour be required please use the CMYK reference as oppose to a RAL or Pantone reference. All glass is optically clear, low iron glass however some variation may occur. A one off artwork and set up charge is payable for each picture/size of glass. Please contact your supplier for details.
