

Bevelled Edge Glass

As an additional option on all glass types, you can add a bevelled edge. Beveling gives the glass a decorative chamfered edge. It gives the glass a classic yet contemporary finish and helps to emphasize edge details.

The bevel can be any width between 8mm and 25mm and can be on any/all edges you select. Simply add the information to the 'Special Requirements' section on your Bespoke Quotation Form and this will be added to your quotation accordingly.

All Aquavision Glass comes with a 1mm chamfer on all edges to smooth off the cut edges however the bevelled edges give a more decorative finish.

Bevelled Edges on MirrorVision+ Glass

Due to the specialist coating that is used on all MirrorVision+ glass, when beveling edges the glass must be printed on the opposite side to normal. This means that there will be a SLIGHT effect on viewing window clarity. With non-bevelled MirrorVision+ glass, you cannot see the outline of the television when in standby however on bevelled edge glass you can see a very slight outline of the screen. If you would like more information on this, please contact a member of the Aquavision team or your local Aquavision dealer/distributor. This does not happen on other standard, uncoated glass types.
