

Bespoke Products

Aquavision supplies bespoke glass solutions for special applications, enabling the creation of unique designs. The 5mm thick glass with polished edges is supplied in any size up to a maximum of 2400mm x 1500mm with one or more of the Aquavision screens fitted behind it. The LCD screen is attached to the glass using the mounting bezel which can be bonded to the back of the glass during manufacturing. If you wish to supply your own bespoke glass we are able to sell the mounting bezel separately, however attaching the bezel to the glass and carrying out the installation will then be the responsibility of the end user. Aquavision can also incorporate multiple screens, mounting holes and basin taps as well as supplying additional matching glass panels to create a whole mirror wall effect. Various options are available to facilitate fixing onto a wall. Quotations can be made by return and delivery will normally be within four to six weeks from order.

Glass Finishes

In addition to MirrorVision+ and fully mirrored [silver] glass, Aquavision can tailor the glass design, print colours, patterns, and company logos on the surface. It is not possible to view a television through a full-chromed mirror therefore Aquavision offer the following options:

MirrorVision+:

Rather than a full chrome mirror, this features a slight dark tint which helps view the picture rather than the reflection. When the television is switched off, the whole of the glass has the same mirror appearance and there is absolutely no sign of the television beneath. When the television is switched on, the area in front of the screen becomes opaque. This gives you the best of both worlds, a near perfect mirror and a crystal clear television picture. Perfect for use in bathrooms, living rooms, boardrooms and bedrooms or anywhere you would want a mirror and a television.

Fully Mirrored Glass:

Aquavision can supply a full-chromed mirror with a blank (clear) glass area where the television is located. When the television is switched off, the area where the television is located will appear black. This gives you a perfect mirror and a perfect television picture, but the screen is always visible.
