

# Viewing Angles Explained

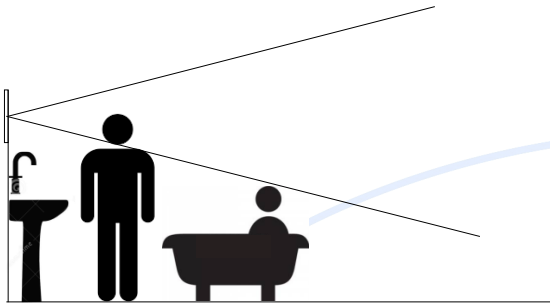

## Why are Viewing Angles so important?

We are all familiar with laptops and realise that when someone is trying to show you something on their screen you sometimes have to adjust the angle of the screen to be able to see the image clearly. This is due to poor viewing angles on your laptop.

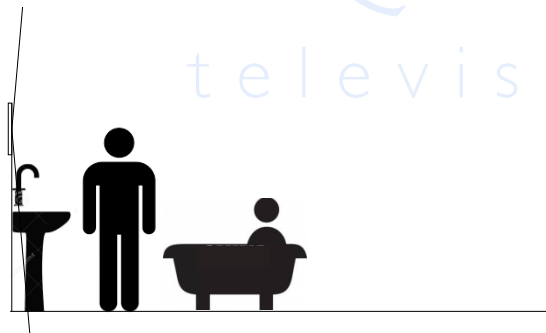

Now imagine you are sat in the bath, with your nice new bathroom TV installed in the wall and you can see it perfectly when you are standing up showering, however when you sit down the picture almost completely disappears. You can't simply adjust your wall, move the television or raise the bath to compensate for this.

This is why viewing angles are important!

Look at the picture below.

This shows a perfect picture when standing, but when you are sitting in the bath, you are outside the "viewing angle" of the panel and the picture disappears.

This picture above shows Aquavision's 178° x 178° viewing angle and how that gives you a perfect picture whether you are standing, sitting or even lying on the floor.

All Aquavision televisions are designed to give you the best viewing angles available on the market.

## NOTE

Not all manufacturers use panels with viewing angles as good as Aquavision.

### HEAD OFFICE AND FACTORY

Aquavision  
Unit 7 Riverpark, Billet Lane  
Berkhamsted, Hertfordshire  
HP4 1HL
