

## AquaTouch

### THE WORLD'S NO1 WATERPROOF TV BRAND IS NOW INTERACTIVE

Without compromise to the superior quality and elegant styling of your Aquavision, you can now increase its value with interactivity, through the simple and easy integration of AquavisionTouch. The clear and ultra-thin touch panel, with zero bezel will leave no visible changes to the current display, maintaining the sophisticated flush appearance of Aquavision's design. Available for 32" and 40" screens and in all 3 standard glass finishes. The AquavisionTouch is a unique projective capacitance touch technology. The single touch offering is compatible with Windows 7&8, Mac or Linux and features the pinch and zoom touch gesture. The sensitivity of the touch can be programmed to work through all standard Aquavision glass and will even work with gloved hands. Key aspects to include:

- All components safely concealed behind the glass to ensure the unit is still waterproof
- Laminated to the inside of the glass avoiding potential damage
- Available on 16", 85" screens as standard.
- No visible change to their current products as AquavisionTouch is also ultra-thin and transparent
- Compatible with Windows, Mac and Linux
- Pinch & Zoom gesture
- Works through gloved hands
- Temperature range is -40°C to 70°C
- Unaffected by condensation

The glass and touch screen comes pre built with a 1.5m lead, terminating in a standard USB plug and comes complete with all necessary software.

Simply install this glass as you would any other Aquavision glass. If this is to be used in a wet area, don't forget to apply the silicon bead around the sides of the glass as described in the glass installation instructions supplied with the glass.
