

23" Upgrade Kit 1

Installation Instructions

Included in your 23" Upgrade Kit 1

- 1x AVF23L-4MVMK1 - 22" Glass
- 1x AVF22L-GLCD - 22" Aquavision Genesis LCD & Remote Control
- 1x AVF-PSUUPGRADE - Power Supply
- 1x AVF-SCUP - Glass Suction Cup
- 1x AVF-23ADAPTORBRK - Pair of Adaptor Brackets

Upgrading your old Aquavision screen

1. Using the suction cup provided, remove the glass enclosure from the front of your Aquavision
2. Remove the current LCD screen and dispose of both the LCD and glass enclosure responsibly
3. Unbox and install your new power supply in the wall
4. Unbox the pair of Adaptor Brackets and attach to the 4 standoffs on the back of the Fixing Kit making sure that the tabs face outwards. Unscrew the white plastic thumb nuts from these brackets.
5. Unbox your new Aquavision 22" LCD screen and attach it to the Fixing Kit using the new Adaptor Brackets. Connect all necessary wires to the back of the TV including the speaker wires if using. Screw the thumb nuts back in place to hold the TV in.
6. Using a non-abrasive cleaner clean the inside of the glass then using the glass sucker provided, place the glass into the frame. Make sure you hear a re-assuring "click" as the glass gets pulled in by the magnets. Before letting go of the glass, press on the glass over each magnet to make sure that the glass has been pulled in tight.
7. Power up your Aquavision TV
8. Once you are happy the TV is working correctly and all of your selected inputs are working you **MUST SILICONE** the enclosure into place. Apply a generous bead of good quality clear silicone around the edge ensuring there are no bubbles or gaps. Wipe away any excess silicone.

NOTE - Failure to silicone the glass will mean your TV IS NOT WATERPROOF.
Any television that is water damaged will not be covered under warranty due to incorrect installation
