

# Silhouette Extrusion Installation Guide

## Installing your Aquavision Silhouette

Aquavision recommends that all installations to be carried out by a qualified installer. Please ensure that the latest wiring and safety regulations are adhered to.

The table below shows the overall sizes of your Silhouette metalwork:

	22"	27"/28"	32"	43"	55"
Overall Size (mm)	558 x 395	706 x 476	837 x 554	1032 x 675	1340 x 819
Overall Depth (mm)	50	75	75	75	75

\*All dimensions have a tolerance of ±1-2mm

1. Once the position has been defined, line the frame up and mark the fixing holes

**NOTE - If you are installing this in a wet environment, apply a bead of silicone around the back of the frame to create a seal between this and the wall. Failure to do this will mean your television is not waterproof and will not be covered under warranty.**

2. The fixing frame should only be mounted on vertical walls, not on sloping attic surfaces or similar. Using the correct fixings, screw the fixing frame to the wall making sure it is true and square.
3. Cut into your wall and run all of the required cables to the TV location including the Power Supply and Speakers if included. Ensure that all the cables are easily accessible and cannot fall back into the wall cavity.
4. The Silhouette frame is now in position to accommodate the LCD unit and finally the glass. Instructions on fitting these components are supplied with each item respectively.

**NOTE - Be careful not to distort the box when tightening the fixings. You must take care not to bend or damage the sides or outer flanges of the box as this could potentially hinder any waterproofing qualities and therefore void the warranty.**
